Launching Gantry Crane

Bridge Launching Gantry Crane

Bridge launching gantry Crane is suitable for road and bridge engineering sites. Because the position is not fixed and the movement is large, the connecting parts are connected in the form of connecting rods, which are easy to disassemble and transport.

Bridge launching gantry Crane is mainly composed of gantry, lifting trolley, crane travel mechanism and electrical control system. The gantry is composed of the main beam, supporting legs, end brackets, cab and sidewalk. Due to the increased space between the legs, the crane is very suitable for handling large objects.

[Bridge launching gantry Crane](#) is widely used for general loading and unloading and lifting work in open-air warehouses or along railways. Zhonggong [cranes factory](#) can provide you various cranes with satisfied service.

Advantages Of Bridge Launching Gantry Crane

- There is enough space to handle large items.
- The product structure has advantages and strong lifting capacity.
- Flexible operation, safe and reliable.

Parameters Of Bridge Launching Gantry Crane

Lifting weight	10~50t
Span	18~35m
Lifting height	5~10m
Working-class	A5
Power supply	3 phase 380V 50HZ OR request

Packing Of Bridge Launching Gantry Crane

- Electrical components are packed in high-quality plywood crates to reduce deformation during transportation.
- The main beams, end beams, and other parts are packed with plastic woven cloth, which can reduce wear during transportation.
- If the size of the entire crane is suitable for a container ship, container transportation is usually used.
