Crane Components

Grab Bucket

Single-rope grab

Single rope grab is only applied to the crane with a lifting rolling drum. The switching mechanism is novel and is operated freely when lifting weights. It is used on the ground or under the water.

Four-rope grab

Four-rope [grab bucket](#) mainly matches with overhead cranes or gantry cranes. It grabs all kinds of materials to load, unload, transport. We can design grabs with tooth, parallel girder opening and working underwater, etc. according to customers' requirements.

Electric hydraulic grab

Electric hydraulic grab adopts comprehensively electricity, hydraulic, mechanical technology with a high degree of automation, strong grabbing force and energy-efficient which is an ideal tool to lift iron, steel and ore materials, etc.

Zhonggong [cranes factory](#) can provide you various cranes with satisfied service.

Advantages of Grab Bucket

- Heavy Duty and High Efficient
- Suitable for any environment
- Long Life Span: 30-50years
- Reasonable structure and strong rigidity
- Frequency conversion speed control
- Cabin control or remote control

Specification of Grab Bucket

Capacity: 0.5~20 CBM

Material: Q235B/Q345B

Industrial voltage: Customized

Video outgoing inspection: Provided

OEM: Available

Packaging details: Packed by high-quality plywood box
