Crane Components

Rolling Drum

Crane Wire Rope Drum is a part of crane lifting mechanism which is used to full in, entwine, and store wire rope. The rope drum has consisted of drum shaft, flange type annular gear, drum hub, bearings, bearing pedestal, etc. Zhonggong [cranes factory](#) can provide you various cranes with satisfied service.

The material of the [crane drum](#) is usually no less than HT20-40 cast iron, ZG25, ZG35 or Q235B, Q345B welding steel plate is also able to be the material for special needs.

Advantages of Rolling Drum

- We can produce crane parts according to customer requirements and application conditions.
- Each production procedure of each part or item is checked and supervised and recorded to ensure the quality of each part or item and each unit of equipment.

Specification of Rolling Drum

Customers can provide their requirements, then we will design and manufacture the crane rope drum to meet the operational and safety requirements of industrial crane applications.

Application of Rolling Drum

Drum units applies to the large tonnage crane machinery which needs high-performance.
